```

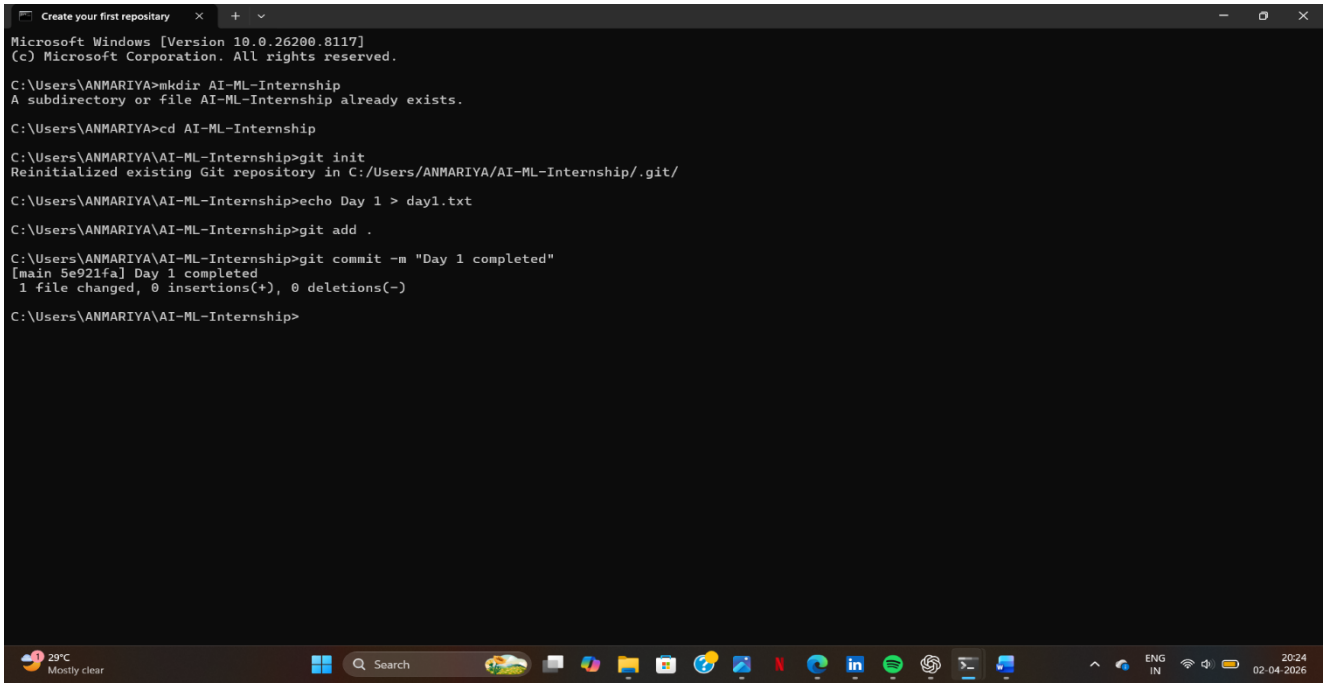
Task 3: Create Your First Repository



```
Microsoft Windows [Version 10.0.26200.8117]
(c) Microsoft Corporation. All rights reserved.

C:\Users\ANMARIYA>mkdir AI-ML-Internship
A subdirectory or file AI-ML-Internship already exists.

C:\Users\ANMARIYA>cd AI-ML-Internship

C:\Users\ANMARIYA\AI-ML-Internship>git init
Reinitialized existing Git repository in C:/Users/ANMARIYA/AI-ML-Internship/.git/

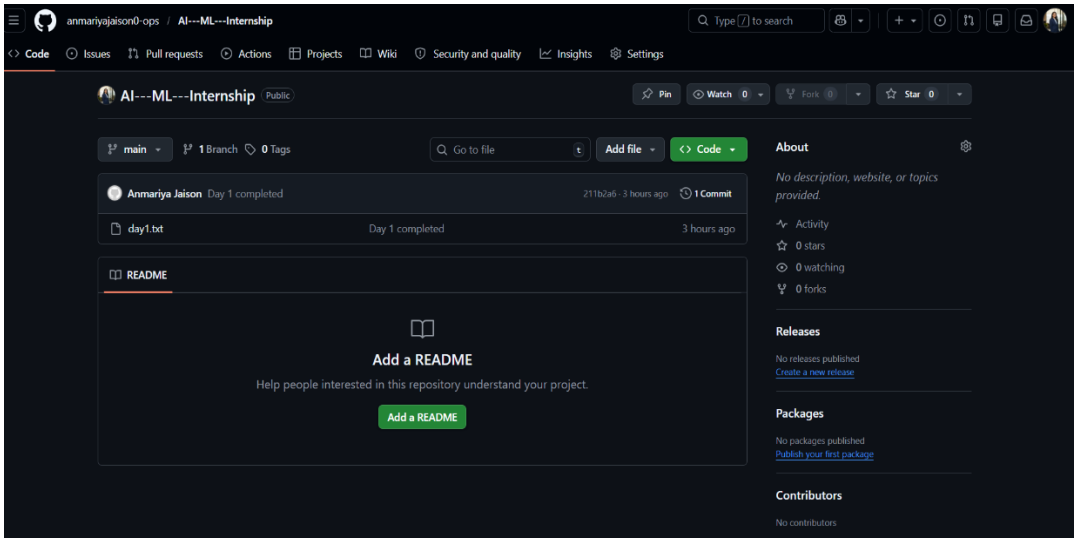
C:\Users\ANMARIYA\AI-ML-Internship>echo Day 1 > day1.txt

C:\Users\ANMARIYA\AI-ML-Internship>git add .

C:\Users\ANMARIYA\AI-ML-Internship>git commit -m "Day 1 completed"
[main 5e921fa] Day 1 completed
 1 file changed, 0 insertions(+), 0 deletions(-)

C:\Users\ANMARIYA\AI-ML-Internship>
```

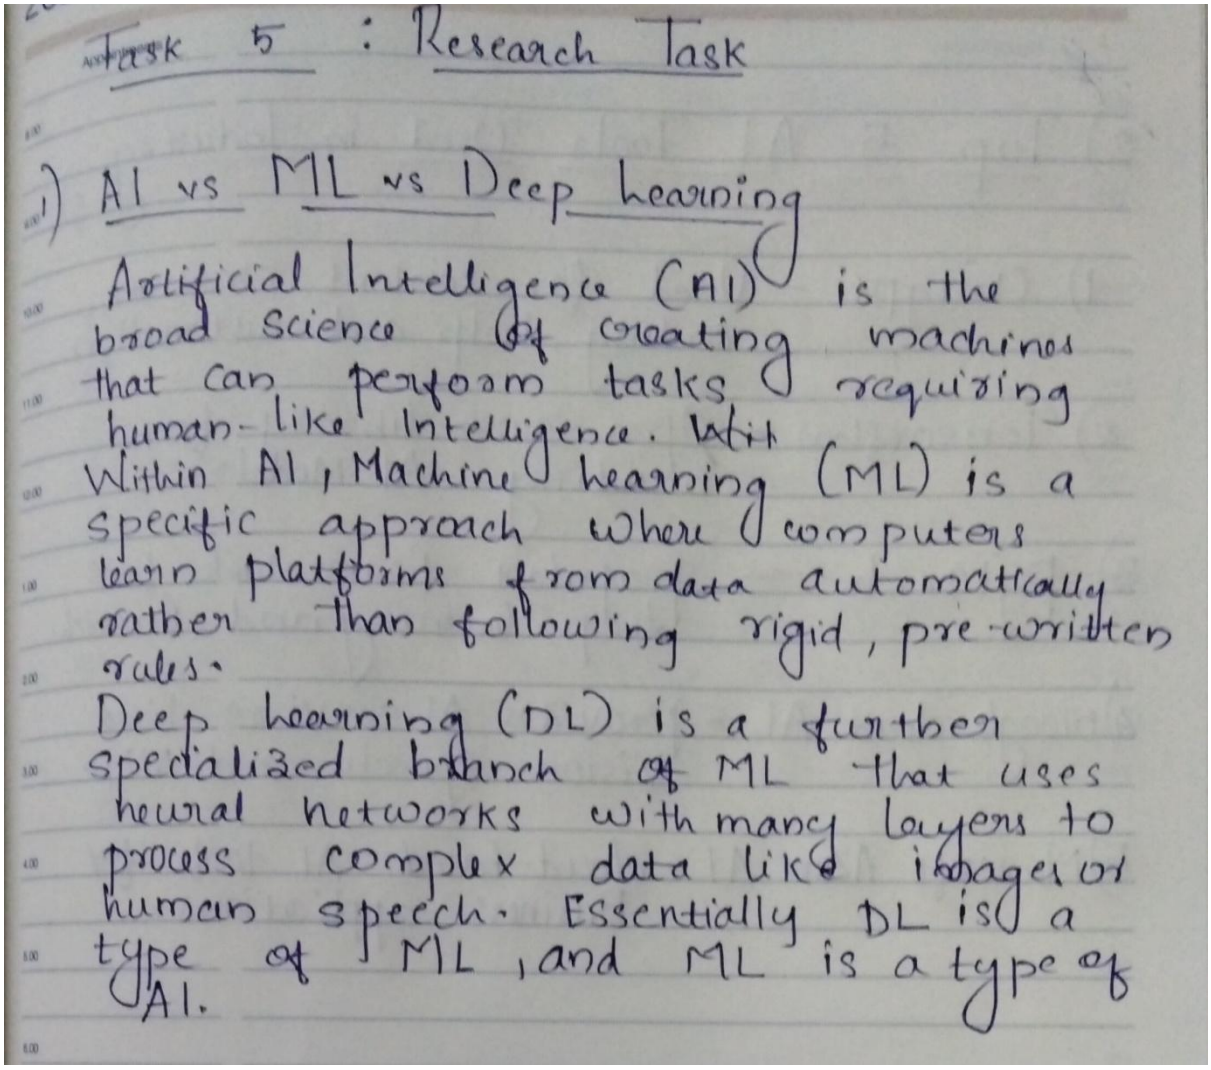
Task 4: GitHub Account



Link: https://github.com/anmariyajaison0-ops/AI---ML---Internship.git

Task 5: Research Task

1) AI vs ML vs Deep Learning



Task 5 : Research Task

1) AI vs ML vs Deep Learning

Artificial Intelligence (AI) is the broad science of creating machines that can perform tasks requiring human-like intelligence. Within AI, Machine learning (ML) is a specific approach where computers learn platforms from data automatically rather than following rigid, pre-written rules.

Deep learning (DL) is a further specialized branch of ML that uses neural networks with many layers to process complex data like images or human speech. Essentially DL is a type of ML, and ML is a type of AI.

2) Top 5 AI tools used in industry

2) Top 5 AI Tools Used in Industry

1) Chatgpt - Used for content creation, coding help and automation

2) Tensorflow - Open source library for building AI Models.

3) Pytorch - Popular framework for deep learning and Research.

4) Google cloud AI - Provides AI services like Vision, speech and NLP.

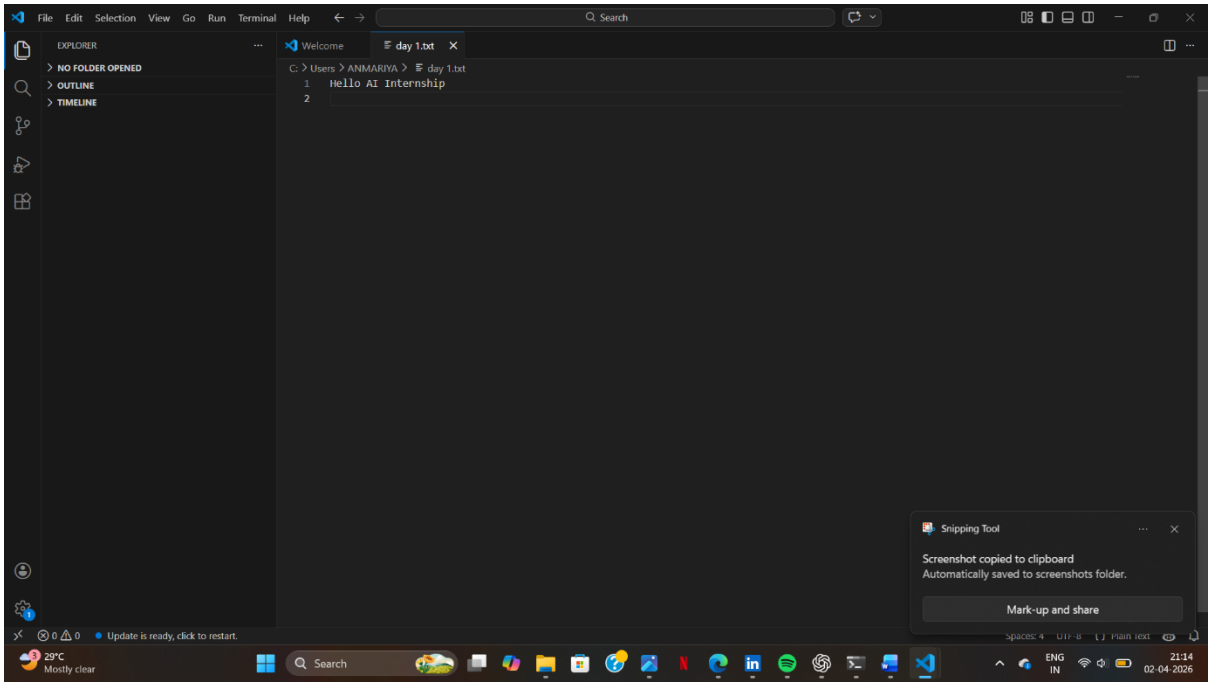
5) Microsoft Azure AI - cloud-based AI tools for Business applications.

Task 6: Practical Thinking Task

If you build an AI project, what problem will you solve and how

Task 6 : Practical Thinking Test

If you build an AI project, what problem will you solve and how?

If build an AI project, I would solve the problem of time management for students. Many students find it difficult to manage their study time properly and often get distracted. My AI System would act as a smart study planner. It would analyze the student's daily routine, subjects and deadlines. Based on this, it would create a personalized timetable for studying.


Task 7: Bonus Task
